Audit report of Eve100

Date – 27/04/2026

Audited by – Prince yadav

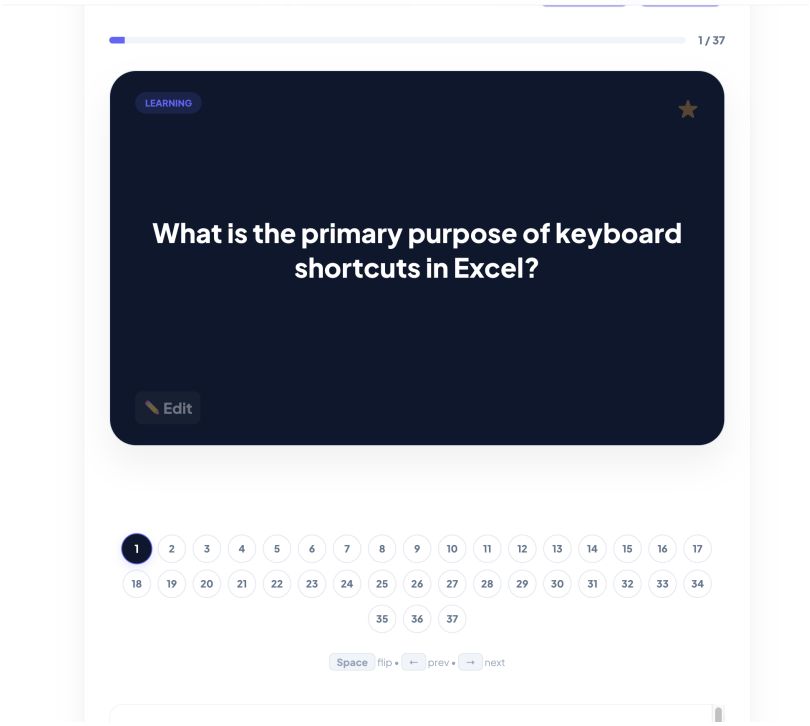
Issue 1 - No State Memory (Session Progress Lost)

URL - https://eve100.com/study-flashcards/

Path - Homepage → Flashcards

Description-

While using the flashcards, I noticed that if I refresh the page or leave and come back, everything resets. It doesn't remember which cards I already went through. This makes it a bit frustrating because I have to start again from the beginning every time, especially if I was halfway through.



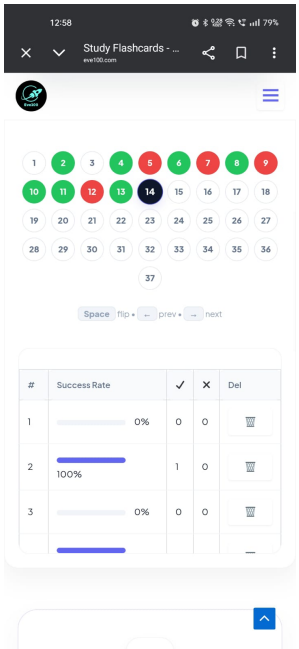
Suggested Solution-

It would be better if the website could remember the user's progress. Even a simple "continue where you left off" option would help a lot. This can be done by saving progress either locally or on the server if the user is logged in.

Issue 2 - Confusing Interaction Instructions in Flashcards

URL - https://eve100.com/study-flashcards/

Path - Homepage → Flashcards



Description-

In the flashcards section, I noticed instructions like "Space = flip" along with arrows for next and previous. It feels a bit confusing, especially at first. On desktop it's still somewhat understandable, but on mobile it doesn't make much sense since there's no keyboard. Also, the text and icons are quite small, so it's easy to miss them.

Because of this, it's not immediately clear that the card is interactive, and a new user might take a few seconds to figure out what to do.

Suggested Solution-

It would be better to use simpler instructions like "Tap to flip card" and make them more visible. Also, showing a small hint or animation the first time someone opens flashcards could help users understand it faster.

Issue 3 - Flashcards Feel Like Static Content (No Engagement Features)

URL - https://eve100.com/flashcards/

Path -Homepage → Flashcards

Description-

While using the flashcards, it felt more like just going through static content. There are no features like streaks, points, or any kind of rewards to keep the user motivated. After a few cards, it starts to feel repetitive, and there's nothing pushing the user to continue or come back later.

Because of this, the experience feels a bit plain and may not hold attention for long.

Suggested Solution-

Adding simple engagement features could improve this a lot. For example, showing a daily streak, giving points or badges for completing cards, or setting small daily goals. These kinds of features can make the experience more interactive and encourage users to keep coming back.

Issue 4 - No Personalization in Learning Experience

URL - https://eve100.com/

Path - Homepage → Flashcards /

Description –

While exploring the platform, I noticed that every user gets the same experience. The content shown doesn't change based on what the user has already studied or where they are struggling. It feels very generic, like there's no connection to the user's progress or interests.

Because of this, the experience doesn't feel very engaging or tailored, and users might not feel motivated to continue.

Suggested Solution –

The platform could improve this by recommending content based on user activity. For example, suggesting flashcards from topics the user has already started or focusing more on weaker areas. Even a simple "recommended for you" or "continue learning" section would make the experience feel more personalized.

Issue 5- Different Names Used for Privacy Policy and Terms Pages

URL –

https://eve100.com/privacy-policy/

https://eve100.com/terms-conditions/

Path - Homepage → Footer → Privacy Policy / Terms & Conditions / Refund Policy

Description –

While checking the footer links, I noticed that the page names don't match after opening them. The link says "Privacy Policy", but the page heading shows "Privacy Systems". Similarly, "Terms & Conditions" opens a page that says "Terms of Service".

Also, the "Refund Policy" link opens a page titled "Access Policy", which is not expected and can be confusing.

Even though these are small differences, they matter more for legal pages because users expect clear and consistent naming.

Terms of Service

This document governs the technical relationship between the User and **Eve100** (a brand of EveSpace Consulting Pvt Ltd). Accessing our platform constitutes acceptance of these operational parameters.

Privacy Systems

Eve100 maintains a rigorous standard for data ingestion and lifecycle management. This policy outlines our technical handling of user metadata.

Access Policy

Eve100 provides high-value digital assets, including proprietary flashcard sets and mock test series, provisioned immediately upon account activation.

Suggested Solution:
Keep the naming the same across the website. For example, if the link says “Privacy Policy”, the page heading should also say “Privacy Policy”. The same should apply to “Terms & Conditions” and “Refund Policy” so everything feels consistent and easy to understand.
