Issue 01 - Filters Auto-Refresh Without Waiting for the Search Button

Drive link - https://drive.google.com/file/d/1W5FxTN5jn-fqNorijXcxaGf0ztdsU8HY/view?usp=drive_link

URL -

https://eveplacement.com/internships/ | https://eveplacement.com/jobs/

Navigation Path

EvePaper → Internships → Find Internships → Filter Panel

Description -

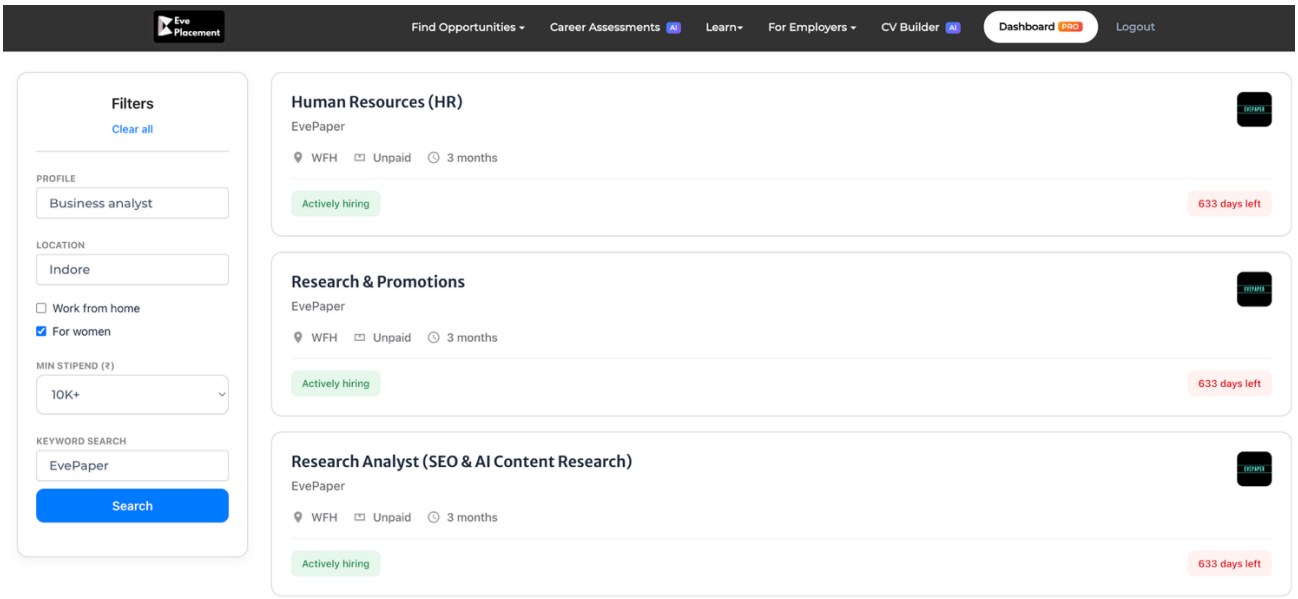
On the eveplacement.com internship and jobs listing pages, each filter field (Profile, Location, Stipend, Department, Experience) triggers an automatic search the moment the user interacts with it — before clicking the 'Search' button. This defeats the purpose of having a dedicated Search button entirely. Users cannot set multiple filters together and apply them in one go. Each individual selection causes the results to reload mid-selection, which is disruptive and wastes time, especially on slower connections.

Suggested Improvement -

Disable auto-search on individual filter change. All filters should only be applied when the user explicitly clicks the 'Search' button. This is standard UX practice for multi-filter search panels.

Issue 02 - All Filters Return Incorrect / Mismatched Results

URL - https://eveplacement.com/internships/ | https://eveplacement.com/jobs/



Navigation Path -

EvePaper → Internships → Find Internships → Apply Any Filter → Search

Description-

None of the filters on the listing pages return accurate results. Three specific cases were observed:

(1) The minimum stipend filter set to '10K+' still shows listings marked 'Unpaid' — including HR, Research & Promotions, and Research Analyst roles.

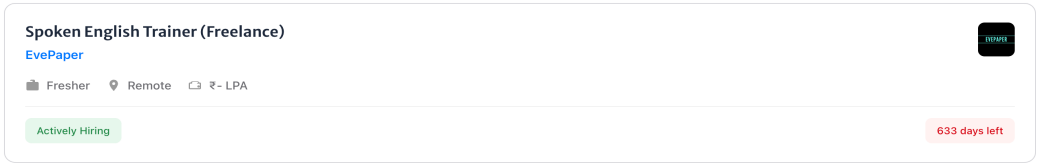
(2) The Profile filter set to 'Business Analyst' returns completely unrelated HR and Research roles.

(3) On the Jobs page, Department set to 'Finance' with 5-10 Years experience returns 'Spoken English Trainer (Freelance)' tagged as Fresher — with zero relevance to the applied filters. Across all three cases, the filters are simply not reflected in the results, making the entire search system unreliable.

Suggested Improvement-

Fix the filter-to-query mapping on the backend so all active filters are applied together using AND logic. Stipend filters must exclude 'Unpaid' listings, and profile/department filters must match against the correct job category fields. Run end-to-end filter tests before redeployment.

Issue 03 - Salary Field Displays Broken / Incomplete Data ('Rs.- LPA')



URL -

https://eveplacement.com/jobs/

Navigation Path

EvePaper → Internships → Explore Jobs (eveplacement.com) → Jobs Listing

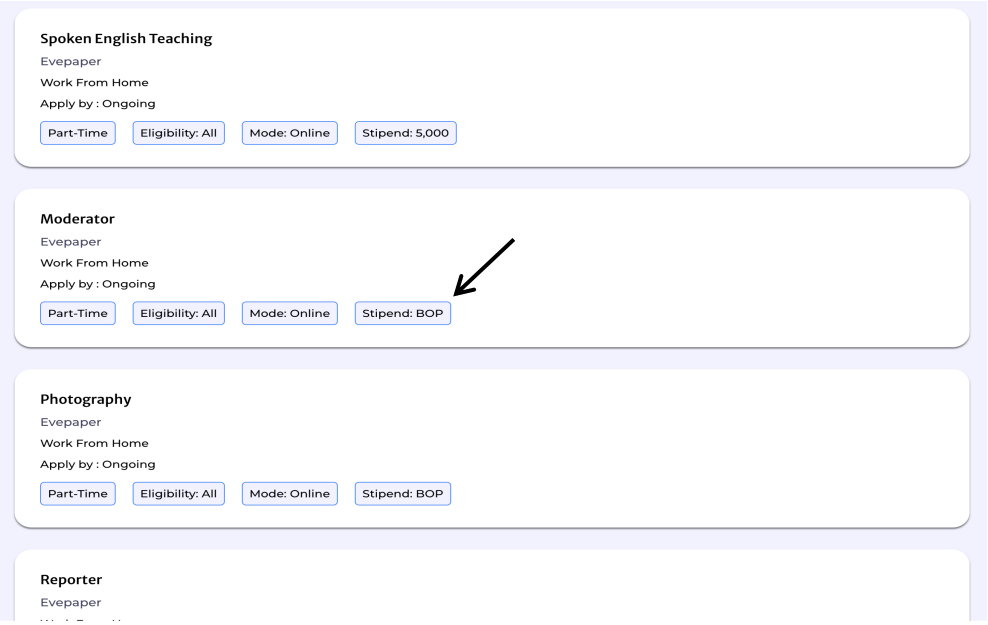
Description -

In the Jobs listing on eveplacement.com, the salary/compensation field for the 'Spoken English Trainer (Freelance)' listing (and potentially others) displays as 'Rs.- LPA' — a placeholder with no actual value filled in. This indicates that the job posting was submitted with an empty salary field, and the system published it without validation. Users cannot make informed decisions about applying when compensation details are missing.

Suggested Improvement -

Add a mandatory validation rule for the salary/stipend field during job/internship submission. If the recruiter chooses not to disclose salary, it should display 'Not Disclosed' rather than a broken placeholder like 'Rs.- LPA'.

Issue 04 - Unexplained 'BOP' Label Used for Stipend on EvePaper Internship Listings



URL -

https://evepaper.com/jobs-and-internships/

Navigation Path –

EvePaper → Internships (Header) → Internship Cards → Stipend Tag

Description -

Several internship listings on the evepaper.com internship section (Moderator, Photography, Reporter) show 'Stipend: BOP' as their compensation tag. The term 'BOP' is not explained anywhere on the page — no tooltip, footnote, or glossary. Most students would not know what 'BOP' means (likely 'Based on Performance'), leading to confusion and potentially causing users to skip over valid opportunities due to unclear information.

Suggested Improvement -

Replace 'BOP' with the full phrase 'Based on Performance' or add a tooltip/info icon that explains the term on hover. Consistent and clear labeling improves user trust and reduces confusion.
