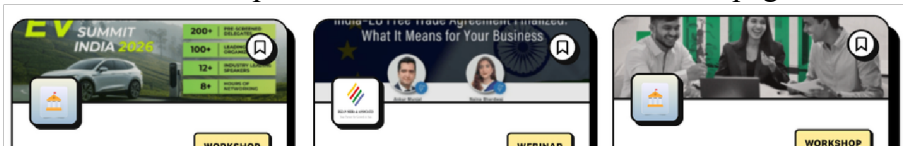
Navigation Path -
Homepage → Workshops from Header

Issue 1: Improper Banner Display in Event Cards -

Description -
While browsing the workshops section, most of the event cards display banners that appear partially hidden or cut within the card layout. Important parts of the image are not fully visible, which reduces the visual quality of the event card and can make the banner content difficult to understand.

This issue affects the overall presentation of events and makes the page look less polished.



Suggested Improvement -
Adjust the banner container settings so that images fit properly within the card layout. Using a fixed display ratio and proper image scaling (such as object-fit settings) can ensure the full banner is visible without cutting important content.

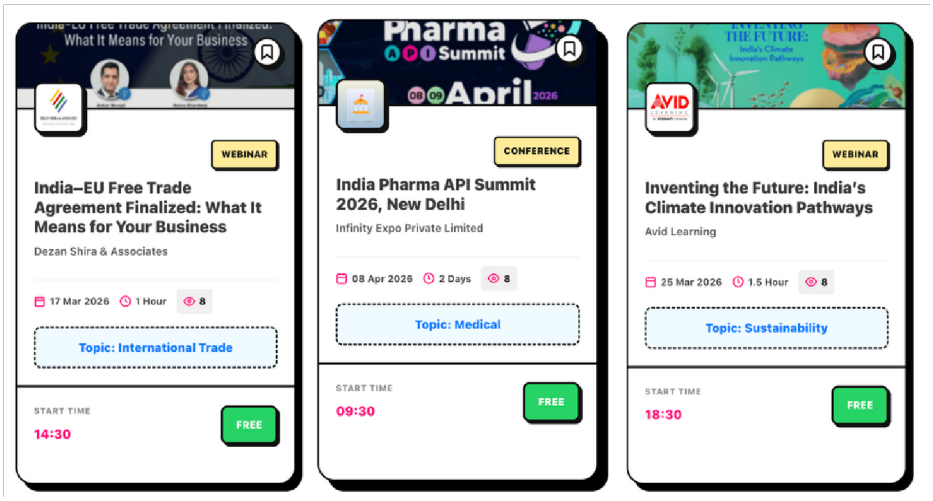
Issue 2: Limited Information on Workshop Event Cards -

Description -
Workshop cards display limited details. Important information such as event location, event mode (online/offline). Users must open each event individually to understand basic details.

Suggested Improvement –

Display key information directly on the event card such as:
• Location
• Online / Offline mode

This helps users quickly evaluate workshops.



Issue 3: Limited Filtering Options -

Description -
The workshops section currently provides filtering options based on category and topic. While this helps in narrowing down events to some extent, other important filtering options are missing.

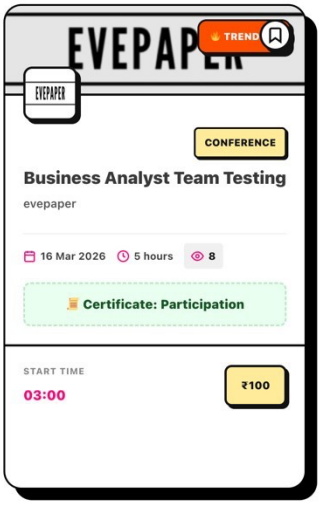
Users cannot filter workshops based on location **or** event mode (online/offline)**.** For students looking for events in a specific city or those who prefer online sessions, this makes the search process less efficient.

Suggested Improvement -
Expand the filtering system to include additional parameters such as:

• Location-based filtering
• Online / Offline mode

Adding these filters would make it easier for users to quickly find workshops that match their preferences.

Issue 4: Trending Tag is hidden on the event card –



Description - The Trending tag appears behind the bookmark icon, making the label partially hidden.

Suggested Improvement -
Move the trending tag to another corner of the event card so both the bookmark icon and trending tag remain visible.

• Fests Page Audit –

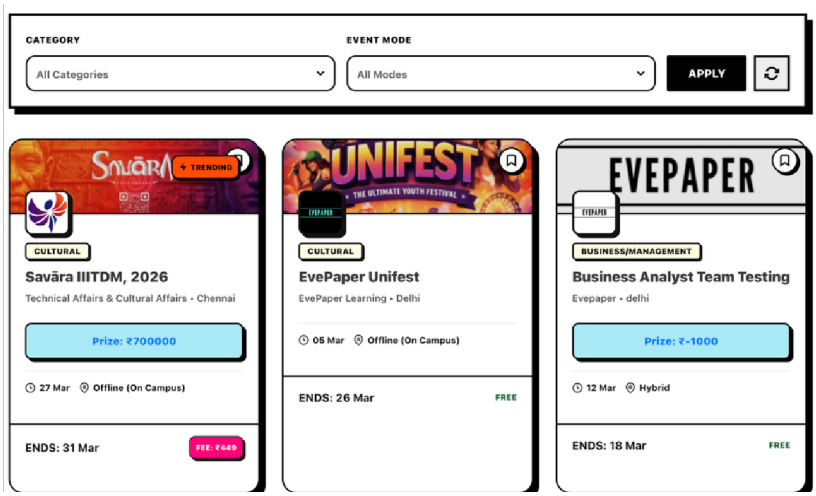
URL - https://evepaper.com/fests/

Navigation Path -
Homepage → Fests from Header

Issue 1: Trending Tag Overlapping with Bookmark Icon –

Description -
The trending label partially overlaps with the bookmark button in some fest cards, which reduces readability and creates UI clutter.

Suggested Improvement -
Adjust the placement of the trending tag so that it does not overlap with the bookmark feature.



Issue 2: Location Not Clearly Highlighted –

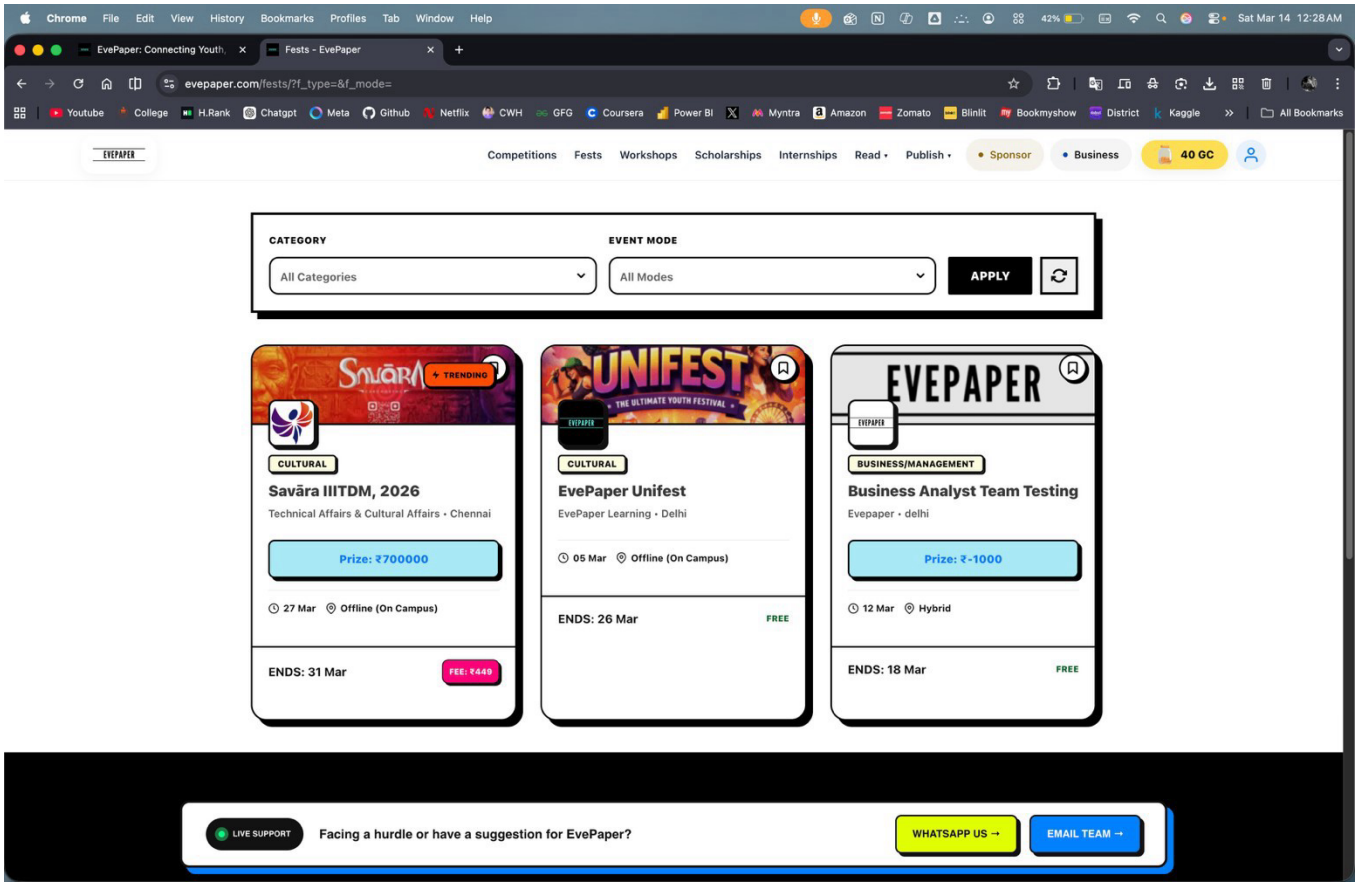
Description -
The event location is not clearly highlighted in the fest event cards. Since many users search for fests based on location, the lack of visible location information makes browsing less convenient.

Suggested Improvement -
Display the event location prominently on the event card to help users quickly identify nearby fests.

Issue 3: Missing Clear Section Header –

Description -
The fest page lacks a clear and strong section heading that immediately tells users they are browsing the fest section. This may cause slight confusion during navigation.

Suggested Improvement -
Add a clear heading such as "Explore Fests and Events" to improve page clarity.



Conclusion -

The audit of the EvePaper Fests and Workshops sections identified several usability and design issues primarily related to event card layout, information visibility, and interface consistency.

Improving banner dimensions, adding filtering options, highlighting key event information, and refining UI elements like trending tags can significantly enhance the overall user experience and make event discovery easier for users.
